

SUNDAS SALEEM

Senior Software Engineer | Enterprise Integrations & AI Agent Deployment | Python • Java • AWS

sundask4.sk@gmail.com • +92 347 241 6097 • Karachi, Pakistan • github.com/sundas-saleem • sundas-saleem.github.io • linkedin.com/in/sundas-saleem-8b516879

PROFESSIONAL SUMMARY

Senior Software Engineer with 6+ years building and deploying production systems for enterprise clients in Python and Java — integrating telephony platforms including Twilio, Five9, Avaya, and Amazon Connect, and running real-time services handling 2M+ interactions/day. Works directly with clients to debug issues in their environments and presents solutions to non-technical stakeholders. Recently led AI agent development on Anthropic and OpenAI APIs, designing MCP server orchestration and human-in-the-loop workflows other engineers built on.

SKILLS

AI & Agents: AI agent development, MCP server design, LLM integration (Anthropic & OpenAI APIs), RAG, human-in-the-loop workflows

Client-Facing: Direct client communication (calls & email), troubleshooting in client environments, demos to non-technical stakeholders

Backend & Microservices: RESTful APIs, microservices, event-driven architecture, Kafka, gRPC, high-throughput services, concurrency, fault tolerance

Java: Spring Boot, REST API development, third-party platform integrations, Selenium WebDriver test automation

Cloud & Delivery: AWS (Lambda, serverless, Amazon Connect), Docker, Kubernetes, CI/CD, GitHub Actions, OpenTelemetry, Prometheus, Grafana

Languages: Python, Java, C++, C#, TypeScript, Node.js, SQL

Databases: PostgreSQL, MySQL, Redis

Real-Time & Voice: SIP, Twilio, Five9, Avaya, Genesys, NICE inContact, Amazon Connect, WebSocket, TCP, gRPC

EXPERIENCE

Senior Software Engineer | **Afiniti, Pakistan** | Jan 2025 – Jun 2026

Owned backend architecture for enterprise real-time telephony platforms — microservices on AWS, Kubernetes, Docker — and led AI agent adoption for engineering automation.

- ◆ Reduced critical production incidents by ~90% by redesigning a single-threaded call-routing service into a multithreaded architecture, sustaining 2M+ calls per day with zero downtime.
- ◆ Worked directly with enterprise clients over calls and email to diagnose and resolve issues in their telephony environments, and presented solutions and demos to non-technical stakeholders.
- ◆ Built a real-time analytics platform with Kafka processing 2M+ events per day, plus AWS Lambda orchestration services propagating agent configurations and routing profiles across distributed environments.
- ◆ Led end-to-end ownership of 4 production microservices for real-time voice — switch interface, SIP call dialing, telephony orchestration, and QA validation — each serving multiple enterprise clients.
- ◆ Architected a reusable OpenTelemetry instrumentation library adopted across 10+ microservices — cutting troubleshooting effort by 70% through distributed tracing.
- ◆ Designed a multi-agent AI system on Anthropic and OpenAI APIs — PR review, code review, Jira, and log-analysis agents orchestrated via MCP servers — defining agent abstractions and human-in-the-loop workflows other engineers built on.
- ◆ Drove code reviews, engineering standards, and mentored 2 junior engineers, shaping API conventions and design practices across the platform.

Software Engineer | **Afiniti, Pakistan** | Oct 2021 – Jan 2025

Designed and delivered backend services, test automation, and real-time telephony integrations used across engineering teams.

- ◆ Designed REST APIs and integrations for Twilio, Five9, Avaya, and NICE inContact — cutting integration defects by 40%.
- ◆ Built Java test automation with Selenium WebDriver and high-scale load testing framework simulating 100+ concurrent agents and 1M+ calls end-to-end — achieving 95% production coverage before every release.
- ◆ Built a Python log analytics platform automating diagnostics of production telephony workflows — improving incident resolution efficiency by 45%.

Analyst Software Engineer | **Afiniti, Pakistan** | Dec 2019 – Oct 2021

Built telephony integration, automation, and validation platforms adopted as engineering-wide standards.

- ◆ Built a telephony platform in Java Spring Boot integrating multiple third-party telephony providers behind unified REST APIs.
- ◆ Designed a Node.js simulation platform supporting REST, TCP, and WebSocket protocols for end-to-end validation of distributed real-time communication workflows.
- ◆ Built a distributed integration testing platform with near-complete microservice coverage, enabling automated regression testing across the product ecosystem.

EDUCATION

Bachelor of Science in Software Engineering • NED University of Engineering & Technology, PK • 2015 – 2019
